BUSINESS REQUIREMENTS DOCUMENT

HR Appointment Allowance Request Management System

Business Analysis Portfolio Case Study | BRD v1.0 | 18 October 2026

Fictional scenario — all policies, workflows, metrics and organizational details are illustrative and require stakeholder validation.

Document control

Field	Value
Document owner	Business Analyst (portfolio case study)
Status	Draft for stakeholder review
Business sponsor	HR Director (fictional)
Scope	Appointment allowance requests only
Related artifacts	Project Charter; Stakeholder Analysis; As-Is Process

1. Executive summary

The organization currently receives appointment allowance requests through email and manual forms. HR staff check completeness, maintain a spreadsheet tracker and route requests for approval. This creates limited status visibility, inconsistent records and avoidable follow-up. The proposed solution is a centralized self-service workflow for submitting, reviewing, deciding and tracking requests, with auditable history and management reporting.

2. Business context and problem

2.1 Current state

In the illustrative As-Is process, an employee sends a form and supporting information by email. An HR Specialist checks completeness, requests missing information when needed, evaluates eligibility using applicable policy, and forwards the request to an HR Manager for a decision. The outcome is communicated manually; the tracker is updated separately.

2.2 Business pain points

ID	Problem	Business impact
P-01	Requests and evidence distributed across email	Difficult to trace history and ownership
P-02	Incomplete submissions discovered after receipt	Rework and longer cycle time
P-03	Spreadsheet status maintained manually	Potential inconsistency and reporting effort
P-04	No self-service status visibility	Repeated employee follow-up
P-05	Limited stage timestamps	Bottlenecks hard to quantify

3. Business objectives and success measures

Objective	Proposed KPI	Illustrative target*
Increase transparency	% of requests with visible current status	100%

Improve submission quality	% of requests returned for missing information	< 10%
Improve processing efficiency	Median working days from complete submission to decision	≤ 5 days
Improve auditability	% of decisions with actor, date and reason recorded	100%
Enable operational reporting	Availability of monthly volume/status report	Monthly

*Targets are planning assumptions, not baselines or verified commitments. Confirm feasibility and definitions with HR stakeholders before approval.

4. Scope and boundaries

In scope	Out of scope
Employee submission and status tracking	Payroll calculation or payment execution
Mandatory-field and document completeness checks	Live integration with external government platforms
HR review and decision routing	Changes to statutory eligibility policy
Role-based access and decision audit trail	Full implementation or production deployment
Request notifications and operational reporting	Other HR allowance types

5. Stakeholders and business needs

Stakeholder	Need / expected outcome
Employee	Simple submission; clear status; timely requests for missing information
HR Specialist	Complete information; consistent review queue; eligibility checklist
HR Manager / Approver	Decision-ready requests; visible evidence and history
HR Management / Sponsor	Reliable workload and turnaround reports
System Administrator / IT	Controlled access, maintainable workflow and audit logs
Information Security / Compliance	Appropriate protection and retention of employee data

6. Business requirements

ID	Requirement	Priority	Source
BR-01	Provide a single channel for employees to submit appointment allowance requests.	Must	Employee / HR
BR-02	Enable employees to view request status and key milestones.	Must	Employee
BR-03	Apply consistent completeness checks before a request enters HR review.	Must	HR Specialist
BR-04	Support standardized review, approval and rejection decisions with reasons.	Must	HR Manager
BR-05	Maintain an accessible,	Must	HR / Compliance

	traceable history of actions and decisions.		
BR-06	Provide management reports on request volumes, statuses and processing times.	Should	HR Management
BR-07	Notify relevant users of required actions and final outcomes.	Should	Employee / HR
BR-08	Restrict employee data and actions based on authorized roles.	Must	IT / Security

7. Proposed business rules — to validate

ID	Rule / open policy dependency
RULE-01	Only authenticated employees may submit their own requests.
RULE-02	Mandatory fields must be completed before submission.
RULE-03	HR reviews eligibility against an approved policy checklist; actual eligibility criteria are TBD.
RULE-04	Only designated approvers may approve or reject a request.
RULE-05	A rejection or return-for-information action requires a reason.
RULE-06	Each status transition records actor, timestamp and previous/new status.
RULE-07	Duplicate-request controls depend on a validated definition of duplicate and relevant period.

8. High-level future-state process

1. Employee signs in and starts an appointment allowance request. 2. System pre-fills available employee data and validates required fields. 3. Employee submits and receives a request reference. 4. HR Specialist reviews completeness and eligibility; may return for information. 5. Authorized HR Manager approves or rejects. 6. System records the decision, updates status and notifies the employee. 7. Authorized management users access aggregate reporting.

9. Data and reporting needs

Data group	Example fields / considerations
Request	Request ID, employee ID, request type, submitted date, current status
Review	Assigned reviewer, completeness result, eligibility outcome, comments
Decision	Approver, decision, decision date, reason
Audit	Action, actor, timestamp, old/new status
Reporting	Requests by month/status, returns for missing information, processing time by stage

Sensitive employee data should be minimized and protected. Retention, export permissions and reporting access must be confirmed with the organization.

10. Assumptions, dependencies and constraints

Type	Description
Assumption	Corporate authentication and an employee master record are available in the future design.
Assumption	HR Manager is final approver in this fictional scenario.
Dependency	Policy owner must confirm appointment allowance eligibility and required evidence.
Dependency	IT and Security must confirm access, hosting and retention requirements.
Constraint	Portfolio project uses synthetic data and does not implement payroll or live integrations.

11. Risks and mitigation

Risk	Impact	Mitigation
Eligibility rules not agreed	Inaccurate workflow / decisions	Hold policy workshop; obtain written rule approval
Unclear approval authority	Misrouted requests	Validate RACI and approval matrix
Poor quality source data	Incorrect pre-filled information	Define data owner and validation checks
Overly broad project scope	Delayed deliverables	Limit release to appointment allowance
Sensitive data exposure	Privacy and compliance concerns	Use synthetic data; specify role access and retention

12. Acceptance criteria (business level)

ID	Business acceptance criterion
AC-01	An employee can submit a complete request and receive a unique reference.
AC-02	Incomplete requests cannot proceed without clear field-level feedback.
AC-03	Authorized HR users can review and route requests, including returning for more information.
AC-04	Only an authorized approver can issue the final decision.
AC-05	Employee can view status and receives a decision notification.
AC-06	The request history includes status changes, responsible actor and timestamp.
AC-07	An authorized manager can view request counts and turnaround indicators.

13. Requirements traceability (sample)

Business requirement	Proposed feature	Acceptance criteria
BR-01	Self-service request form	AC-01
BR-02	Request tracking page	AC-05
BR-03	Required-field validation	AC-02
BR-04	HR review / approval workflow	AC-03, AC-04

BR-05	Audit log	AC-06
BR-06	Reporting dashboard	AC-07
BR-07	Notifications	AC-05
BR-08	Role-based authorization	AC-04

14. Open questions for stakeholder workshops

• What exact policy determines appointment allowance eligibility and supporting evidence?

• Who is the final approver, and does approval vary by employee category?

• What are the approved request statuses and return/resubmission rules?

• What is the target service-level agreement and how are working days calculated?

• Should duplicate requests be blocked, flagged, or reviewed?

• What data is available for auto-fill and who owns its accuracy?

• Which reports and data retention periods are mandatory?

15. Review and sign-off

Role	Reviewer	Status / date
Business Sponsor	TBD	Pending
HR Process Owner	TBD	Pending
IT Representative	TBD	Pending
Security / Compliance	TBD	Pending

This BRD is a proposed case-study baseline. Approval signifies agreement on business needs; detailed functional requirements, To-Be BPMN, wireframes and test cases will be developed in subsequent artifacts.
